FBQ1: $\qquad$ is worn in the laboratory to avoid chemicals splashing into the eyes. Answer: Safety googles

FBQ2: $\qquad$ glassware is used to heat and evaporate liquids.
Answer: Evaporating dish
FBQ3: $\qquad$ is the most precise and accurate method of transferring and delivering liquids.
Answer: Volumetric glassware
FBQ4: Any chemical spilled onto the skin should be washed off immediately with

## Answer: Soap and water

FBQ5: Flammable solvents should be boiled away in a $\qquad$ . Answer: Fume hood

FBQ6: The method of separating liquids from solids that involves allowing the solid to settle in a beaker, then transferring the liquid, or supernatant with the aid of a stirring rod to a receiver is called $\qquad$ .
Answer: Decanting
FBQ7: To prevent bumping of a hot liquid out of the container, $\qquad$ is added. Answer: boiling chip

FBQ8: Reaction requiring low temperature of 00C can be carried out in the laboratory by employing $\qquad$ .
Answer: Iceâ€"water bath
FBQ9: In distillation the resultant hot vapour passes into a $\qquad$ and is converted to the liquid.
Answer: Condenser
FBQ10: Vaporisation-condensation cycles is known as $\qquad$ .
Answer: Theoretical plates
FBQ11: The apparatus below is called $\qquad$ .\ 
Answer: Flat bottom flask
FBQ12: Compounds which are $\qquad$ crystallise first in recrystallization/ crystallization technique
Answer: Less soluble
FBQ13: A suitable recrystallization solvent should be partially $\qquad$ in order to be easily removed from the purified crystals.
Answer: Volatile
FBQ14: $\qquad$ is the recovery of a substance from a mixture by bringing it into contact with a solvent which dissolves the desired material.

FBQ15: Distillation technique is applicable or suitable for substances that are in nature.

## Answer: Liquid

FBQ16: $\qquad$ is a technique based on the principle of the equilibrium distribution of a substance (solute) between two immiscible phases, one of which is usually a solvent.
Answer: Extraction
FBQ17: Extraction is carried out by shaking the solution in a $\qquad$ -. Answer: Separatory funnel

FBQ18: Solvents used to extract organic compounds from aqueous mixture orsolution must be $\qquad$ in water
Answer: Virtually insoluble
FBQ19: Boiling point is a $\qquad$ property often used to identify substances or to check the purity of the compound Answer: Physical

FBQ20: The apparatus here presented is called Answer: Buchner funnel

FBQ21: The $\qquad$ cools vapour causing it to reliquify and direct the condensate to the receiving flasks.
Answer: Lieâ€"big condenser
FBQ22: $\qquad$ are used to crúsh solids into powders for experiments.
Answer: Mortar and pestle
FBQ23: $\qquad$ are used to hold many different things such as flasks, crucibles and evaporating dishes when they are hot.
Answer: Tong
FBQ24: Bureftes are used to deliver accurate $\qquad$ .
Answer: Volumes
FBQ25: This apparatus is used for $\qquad$ .

Answer: Measuring liquids by volume
FBQ26: The instrumental set up above is used for $\qquad$ .
Answer: Filtration
FBQ27: The difference between a simple distillation apparatus and a fractional distillation apparatus is that, between the distillation flask and the distillation head is inserted $\qquad$ column.
Answer: Fractionating column

FBQ28: A $\qquad$ is defined as the temperature range over which a small amount of solid in a thin walled capillary tube first visibly softens and then completely liquefies. Answer: Capillary melting point

FBQ29: This apparatus is used for $\qquad$ .

Answer: Measuring liquids by volume
FBQ30: The presence of a $\qquad$ in a crystal lattice interrupts its uniform structure and the forces of attraction are weakened.
Answer: Foreign particle
FBQ31: To avoid the errors in mass due to the use of balances that are not calibrated, one should weigh by a method called $\qquad$ .
Answer: Weighing by difference
FBQ32: The function of stirring when carrying out a chemical reaction in the laboratory is to $\qquad$ the reagents or to aid heat transfer.
Answer: Mix
FBQ33: The process of boiling reactants while continually cooling the vapour returning it back to the flask as a liquid is known as $\qquad$ Answer: Reflux

FBQ34: $\qquad$ is often used to heat solutions that boil below about 900C or to heat a mixture to approximately 1000C.
Answer: Steam bath
FBQ35: The most basic technique for the purification of organic solids is
$\qquad$ .
Answer: Recrystallization
MCQ1: In preparing a standard solution, two factors must be considered, namely: Answer: 1.The solute-must be pure 2 . The suitable solvent should be measure to a definite volume

MCQ2: A solution contains 1.2 Molar concentration, what volume of it must be diluted with water to give 600 mls of 0.5 Molar solution?
Answer: 25 mls
MCQ3: In a chemistry laboratory a stoke bottle of acid solution reads, â€œ1.25 specific gravityâ€ $\square$; what does that mean?
Answer: 1 cm 3 of that solution weight 1.25 g
MCQ4: If 2 cm 3 of a stoke solution contains 1 mole of an acid how would you prepare 1 molar concentration of that acid in 250 cm 3 of water?
Answer: Dissolve 2 cm 3 of the stoke solution in 248 cm 3 of water
MCQ5: A substance which loses water of hydration upon exposure to atmosphere is
called?
Answer: Efflorescence substance
MCQ6: A substance which takes in only moisture upon exposure to atmosphere is referred to as?
Answer: Deliquescent substance
MCQ7: A table of requirement for laboratory experiment contains the following except? Answer: List of weight of each reagents

MCQ8: Give reason why water should not be added to acid during carrying out acidbase titration?
Answer: The dissolution of acid in water is exothermic which may cause explosion
MCQ9: The concentration of pure HCl 11.7 Molar if 20 cm 3 of the acid is diluted to 250 cm 3 to give concentration of 0.936 mol.dm3 substitute this values on this equation; CIVI=C2V2?
Answer: $11.7 \times 20=0.936 \times 250$
MCQ10: The point at which stoicheometrically equivalent quantities of substance have been brought together is known as?
Answer: Equivalence point of titration
MCQ11: Which of the following options is an indicator used for acid-base titration?
Answer: Methyl orange
MCQ12: In an acid base titration conducted by a student, the colour of the solution in the beaker changed from colourless to pink when phenolphthalein was used as an indicator, what went wrong?
Answer: The beaker was occupied by acid solution instead of base.
MCQ13: What is a PH of a solution?
Answer: It is the measure of hydrogen ions concentration in the solution
MCQ14: At neutralization point, the PH value is?
Answer: Seven
MCQ15: At complete neutralization point, the litmus paper colour turns?
Answer: Purple
MCQ16: Predict the colour of methyl orange when pH is 8 ?
Answer: Yellow
MCQ17: What is the colour of bromothymol when added to an acid solution?
Answer: Yellow
MCQ18: An indicator $X$ was added to an acid solution in a beaker but no colour change was observed give the name of the indicator $X$ ?
Answer: Phenolphthalein

MCQ19: What is a strong acid?
Answer: Any acid that ionizes completely in solution
MCQ20: An example of a strong acid is?
Answer: H2SO4
MCQ21: What type of indicator will be suitable for use in a titration involving $\mathrm{H} 2 \mathrm{SO} 4+$ NH3(ag)?
Answer: Methyl orange
MCQ22: Which of these indicators will be suitable for use in a titration involving a weak acid and a strong base?
Answer: Phenolphthalein
MCQ23: What is the implication of adding a phenolphthalein as an indicator đuring the titration of HCl against Na 2 CO 3 ?
Answer: The end point will appear when only half of Na 2 CO 3 has been used
MCQ24: What is the importance of back titration?
Answer: To determine the concentration of a substance that isin excess after a chemical reaction.

MCQ25: A 25 ml solution of 0.5 M NaOH is titrated until neutralized into a 50 ml sample of HCl ?
Answer: 0.25 mol
MCQ26: A student used a hard tap water and performed and acid base titration. In few lines explain what would happen to his result?
Answer: the starting solution would be more alkaline therefore it would require more volume of acid than expected

MCQ27: Choose the most suitable water for use in acid base titration?
Answer: Deionised water
MCQ28: Both molarity and normality are measures of concentration. True or false?
Answer: True
MCQ29:During acid-base titration sulphuric acid would be dissociated into what ions?
Answer: $2 \mathrm{H}++\mathrm{SO}_{-}$
MCQ30: What is a titrand in titration analysis?
Answer: Unknown concentration of an analyte
MCQ31: What is a titrant in titration analysis?
Answer: Known concentration and volume of an analyte
MCQ32: Which of these is a method of finding the equivalence point?
Answer: All of the options

MCQ33: When performing acid-base titration, one should first?
Answer: Rinse the burette twice with acid solution

$$
\text { MCQ34: The equation } \mathrm{NaOH}+\mathrm{HCl} \hat{a}^{\prime}{ }^{\prime} \mathrm{NaCl}+\mathrm{H} 2 \mathrm{O} \text { is a ____? }
$$

Answer: Neutralization reaction
MCQ35: The following are advantages of acid base titration except?
Answer: Less accuracy and precision
MCQ1: Amongst the glassware listed below $\qquad$ is the most precise and accurate method of transferring and delivering liquids.
Answer: Graduated cylinders
MCQ2: $\qquad$ is not a separation technique frequently employed in the laboratory to isolate one or more components from a mixture?
Answer: Crystallography
MCQ3: Which of these statements is true?
Answer: Simple distillation involves one cycle of vaporisation-condensation
MCQ4: A graduated cylinder is filled to the 40.00 ml mark with mineral oil. The masses of the cylinder before and after the addition of mineral oil are 124.966 g and 159.446 g . Determine the density of the mineral oil.
Answer: $0.8620 \mathrm{~g} / \mathrm{ml}$
MCQ5: A suitable recrystallization solvent is one that $\qquad$ .
Answer: Does not react with the compound being purified
MCQ6: An extraction solvent is usually a $\qquad$ .
Answer: Volatile organic liquid
MCQ7: Â-Â-Â-Â-Â-A -A $\hat{A}-\hat{A}-\hat{A}$ $\qquad$ amongst the options is not used in gravity filtration? Answer: Test tube

MCQ8: Reagents can be agitated/ mixed during a chemical reaction by the use of

## Answer: Magnetic stirrer

MCQ9: The function of placing wire gauze between a vessel containing a substance to be heated and a burner is $\qquad$ .
Answer: To provide support and disperse heat
MCQ10: When acid is spilled in the laboratory it should be $\qquad$ .
Answer: Neutralised with sodium bicarbonate
MCQ11: $\qquad$ does not yield a pure product.
Answer: Extraction

MCQ12: $\qquad$ bonds are broken during a change from the liquid phase to the gas phase.
Answer: Dipole - dipole interactions
MCQ13: One of the disadvantages of wearing loose sleeves to the laboratory during a practical class is $\qquad$ .
Answer: They can sweep flasks from the laboratory bench
MCQ14: $\qquad$ provides a large surface area in which the initial distillate is
redistilled and condensed again.
Answer: Fractionating column
MCQ15: Amongst the various means/method of heating $\qquad$ is used to heat a mixture for extended periods and at certain temperatures.
Answer: Refluxing

MCQ16: Separatory funnel is used to separate $\qquad$
Answer: Two immiscible liquids
MCQ17: $\qquad$ will not provide heat of over 1000C?
Answer: Heating mantle
MCQ18: $\qquad$ is ideal for measuring liquids by volume.
Answer: Graduated cylinder
MCQ19: $\qquad$ is not a volumetric glassware.
Answer: Round bottom flask
MCQ20: Darkened brown or amberglass is used to $\qquad$ .
Answer: Keep out much of UV and IR radiation
MCQ21: Reactions requiring low temperatures can be achieved using all of the options provided to maintain lowtemperature except $\qquad$ .
Answer: Liquid helium
MCQ22: Glassware are used for experiments in the Chemistry laboratory because
Answer: They are relatively inert, transparent and more heat-resistant
MCQ23. Which of these is/are more accurate and precise in taking weight measurements?
Answer: Digital balance
MCQ24: The principle of separation of insoluble solid from a liquid by filtration is based on
Answer: Gravity
MCQ25: All of the following can be used to separate liquids from solids except
$\qquad$ .

MCQ26: Extraction is used for the separation of materials that are $\qquad$ in nature.
Answer: Liquid and solid
MCQ27: Using an unclean volumetric glassware during experiment will $\qquad$ .

MCQ30: Extraction is carried out by shaking the solution with a second solvent that is with the one in which the compound is dissolved.
Answer: Immiscible
MCQ31: Amongst the options listed below $\qquad$ is a better choice for the heating of flammable substances.
Answer: Steambath
MCQ32: Substances that absorb water if left exposed to the air are kept dry in the laboratory by placing them in $\qquad$ .
Answer: A dessicator
MCQ33: $\qquad$ is used to hold solids when being weighed.
Answer: Watch glass
MCQ34: A chemist would determine several physical and chemical properties of a compound because $\qquad$
Answer: It is possible for two different compounds to have a few identical physical and chemical properties.

MCQ35:
is the most common extraction solvent.
Answer: Ethy/ ether
