

FBQ.BIO. 192: The term Pteridophyte refers to _____ plants

Answer: non-seed vascular

MCQ BIO 192: Which of these is not a class of Pteridophytes?

Answer: Anthocerotae

FBQ1: The term Pteridophyte refers to _____ plants

Answer: non-seed vascular

FBQ2: Cnidaria in which their body wall made up of two layers of cells are said to be

Answer: Diploblastic

FBQ3: Diatoms belongs to the group of algae called -----

Answer: Bacillariophyta

FBQ4: Which of the cells in Hydra is for absorption and digestion of food?

Answer: Glandular cells

FBQ5: _____ is the dominant phase of the life cycle of the Pteridophytes.

Answer: The sporophyte

FBQ6: The group of plants which are not differentiated into roots, stems and leaves is called _____

Answer: Thalophytes

FBQ7: The group of plants which usually produce cones on which sporangia ,spores and seeds develop are called

Answer: Conifers

FBQ8: In the class Turbellaria _____ rarely present

Answer: Suckers

FBQ9: The main diagnostic feature of round worm is that it is

Answer: Elongated at both ends

FBQ10: A tissue responsible for secondary growth in plants is called _____

Answer: Cambium

FBQ11: _____ is the transverse division of the body into similar parts

Answer: Metameric segmentation

FBQ12: The common name of Nereis is

Answer: ragworm

FBQ13: The phylum _____ is the largest in terms of the numbers of animal species

Answer: Arthropoda

FBQ14: The exoskeleton in arthropods is secreted by the

Answer: Epidermis

FBQ15: _____ in arthropods and molluscs are filled with blood.

Answer: Haemocoel

FBQ16: The group of animals that are unicellular, animal-like cell with heterotrophic nutrition is

Answer: Protozoan

FBQ17: The leaves of a fern plant are called -----

Answer: Fronds

FBQ18: Panulirus is also known as

Answer: Common shrimp

FBQ19: How many segments are on the stomach of an insect?

Answer: Eleven

FBQ20: The miniature edition of flagella is called

Answer: Cilia

FBQ21: Millipede is a member of which group of arthropod?

Answer: Chilopoda

FBQ22: The dorsal longitudinal running rod in chordates is called

Answer: notochord

FBQ23: The Osteichthyes are commonly called

Answer: bony fishes

FBQ24: In the phylum Rhizopoda, the _____ have naked surface without differentiation

Answer: Sarcodinians

FBQ25: How many pieces of bones are in mammalian ear?

Answer: three pieces

FBQ26: When stained with violet and red dyes, they appear purple, sometimes blue, depending on the temperature. What type of bacteria is this?

Answer: Gram positive bacteria

FBQ27: The circular DNA molecules of eubacteria is called _____

Answer: Plasmids

FBQ28: Some bacteria without cell wall and can change their shape are called -----

Answer: Mycoplasmas

FBQ29: A coating on the outside of cell wall with a definite boundary in some bacteria

is called -----

Answer: Slime layer

FBQ30: When Amoeba pushes lobes of its protoplasm it forms _____

Answer: pseudopodia

FBQ31: Plasmodium that causes malaria belong to the phylum _____

Answer: Apicomplexa

FBQ32: The staining procedure which helps in the recognition and identification of bacteria is called

Answer: Gram's stain

FBQ33: Myxomycota is also known as _____

Answer: Slime mould

FBQ34: The vascular tissue in Pteridophyte is found in _____ generation

Answer: sporophyte

FBQ35: _____ is a member of Porifera which do not form true tissue

Answer: Sponges

MCQ1: Which of these is not a class of Pteridophytes?

Answer: Anthocerotae

MCQ2: Identify the organism in the picture above

Answer: Lycopodium

MCQ3: Based on their carbon and energy sources, eubacteria are

Answer: Photoautotrophic

MCQ4: Based on their habitat, archaeobacteria is grouped into all of the following except

Answer: Halogens

MCQ5: The cell wall of some bacteria is strong and rigid because of the presence of _____

Answer: murein

MCQ6: The essence of staining is to help in

Answer: recognizing and identification of the organism

MCQ7: Which of the following is not an adaptive feature of eubacteria?

Answer: Possession of true roots for anchorage

MCQ8: Apart from the outer membrane, many eubacteria have yet another coating layer called a

Answer: Capsule

MCQ9: When stained with violet and red dye, gram-positive bacteria appear -----

Answer: Purple

MCQ10: Gram-negative bacteria appear _____ when stained with violet and red dye.

Answer: red

MCQ11: Which of the following is not an adaptive feature of the slime mould?

Answer: Possession of phloem tissues

MCQ12: Which of the following is not a diagnostic feature of fungi?

Answer: They have true roots

MCQ13: The Porifera are also known as _____

Answer: sponges

MCQ14: There are ----- classes of the Pteridophytes

Answer: 4

MCQ15: Roundworms belong to the phylum

Answer: nematoda

MCQ16: The phylum Cnidaria include all of the following except

Answer: snakes

MCQ17: The basic unit of classification in the taxonomic hierarchy is

Answer: Species

MCQ18: A roundworm called *Ascaris lumbricoides* is found in ____

Answer: human

MCQ19: One of the following is not a procedure to stain bacteria for examination with light microscope

Answer: none of the options

MCQ20: Identify the plant in the plate above

Answer: Angiosperm

MCQ21: Which of these is not a Diagnostic features Gymnosperm?Â

Answer: Double fertilization

MCQ22: *Entamoeba histolytica* can be found in the _____

Answer: colon

MCQ23: Identify the picture below

Answer: Trypanosoma

MCQ24: Which of these organisms is a member of the Division Zoomastigophora?

Answer: Trypanosoma gambiense

MCQ25: Paramecium is a protozoa in the phylum _____

Answer: Ciliophora

MCQ26: Identify the organism in the picture below

Answer: Paramecium

MCQ27: Which of these structures is not found in paramecium?

Answer: Stigma

MCQ28: The organism in the picture above is _____

Answer: Fucus

MCQ29: Which of these is not an alga protist?

Answer: Slime moulds

MCQ30: Identify the organism above

Answer: Spirogyra

MCQ31: Which of these is not a member of phaeophyta?

Answer: Ulva

MCQ32: The diagram above represent _____

Answer: Rhizopus

MCQ33: Mycelium is septate, Sexual or perfect stage is unknown, Reproduce mostly by means of conidia. These are diagnostic features of _____

Answer: Deuteromycota

MCQ34: Which of these is not a group of slime moulds?

Answer: Paramecia slime moulds

MCQ35: Identify the organism above

Answer: Slime mould
