

National Open University of Nigeria
Plot 91, Cadastral Zone, Nnamdi Azikiwe Expressway, Jabi - Abuja
Faculty of Science
Department of Pure and Applied Sciences
2021_2 EXAMINATION

COURSE CODE: BIO402

COURSE TITLE: CYTOGENETIS OF PLANTS

CREDIT UNIT: 2

TIME ALLOWED: 2 HOURS

INSTRUCTION: ANSWER QUESTION 1 AND ANY OTHER THREE QUESTIONS

- 1 a. Outline the evolutionary significance of gene duplication (5 marks)
b. Explain how monoploids achieve fertility (6 marks)
c. An organism has diploid chromosome number 28. How many chromosomes would you expect in the:
i. monosomic
ii. trisomic
iii. nullisomic
iv. tetrasomic
v. triploid
vi. autotetraploid
(Show how you arrive at each answer) (14 marks)
- 2 a. Draw a well labeled metaphase chromosome (7 marks)
b. Explain chromosome deletion with emphasis on its different types (8 marks)
- 3 a. Explain aneuploidy? (6 marks)
b. Describe Raphanobrassica? (9 marks)
- 4 a. List and compare the two types of chromatins. (6 marks)
b. Write precisely on satellite chromosomes (9 marks)
- 5 a. Write concisely on chromosome translocation based on consequences (6 marks)
b. A diploid plant species A having $2n = 24$ formed hybrid with another species B with $2n = 18$. If the resulting hybrid doubles its chromosome to give an allotetraploid, describe the stages involved in formation of the allotetraploid showing the chromosome numbers and fertility status at every stage using chart only. (9 marks)
