

species of tilapia, alestes, clupeids and synodontis.

Clarotes

[AFS220] Growth of Heterobranchu is very rapid and it can reach up to 1.5m in length with a weight of 30kg

30kg

[AFS220] Vomerine of Heterobranchus is 20.8-255 head length

[AFS220] Normally iron will precipitate out of solution upon exposure to adequate concentrations of oxygen at a pH Greater than 7.0.

[AFS220] The three main types of fin rays are these except Contoured rays

[AFS220] Countable features that are useful to scientists and fish keepers in identifying their fish are called? Meristics

[AFS220] The distance between extremes of dorsal fin and origin of caudal fin of Clarias gariepinus is 0.0-7.6% of standard length.

[AFS220] remains the most widely cultured fish species in Nigeria for commercial purpose Clarias gariepinus

[AFS220] How many amino acids do animals synthesise proteins from? 22 amino acids

[AFS220] Which of the listed fish has placoid scale and tooth- like with the posterior margin carrying a small cusp? 5-6 rays
