

Insulin

[BIO213] In Edman degradation amino acids are sequenced from _____
N-Terminal

[BIO213] Which of these is not peptide?
Fibrinogen

[BIO213] All these are negatively charged exchangers EXCEPT
Sulphopropyl

[BIO213] One of these is a commonly used reagent for 'salting out' of proteins
Ammonium sulphate

[BIO213] One of these will not be necessary to achieve cell disruption in the
purification of proteins
centrifugation

[BIO213] One of these steps involved in protein sequencing is considered as one of the
preparatory steps
Cleavage of disulfide bridges available

[BIO213] One of these purification techniques of proteins is not based molecular size
Electrophoresis

[BIO213] Which of these reagents is known as Edman Reagent?
Phenylisothiocyanate
