

involved?
Glucose hydrolase

[BIO218] One of these is not a simple carbohydrate.
sucrose

[BIO218] Which of these coloration is formed when iodine solution reacts with glycogen ?
red-brown

[BIO218] Which of these tests is necessary to prove the complete hydrolysis of starch ?
Benedict's Test

[BIO218] Which of these reagents is not necessary for a quantitative test?
Barfoed's Reagent

[BIO218] Which of these is not likely to be involved in the quantitative determination of glucose using glucose oxidase method ?
water

[BIO218] At what temperature should absorbance be read in quantitative estimation of reducing sugars by the dinitrosalicylate method
room temperature

[BIO218] Which of these tests is necessary for quantitative determination of carbohydrates?
Anthrone reagent

[BIO218] At which of these wavelengths is absorption read in quantitative estimation of reducing sugars by the dinitrosalicylate method ?
540 nm

[BIO218] Which of these is not involved in Molish test ?
potassium sodium tartrate
