

message

[CIT383] The general component of class is known as member

[CIT383] The following are benefits of bundling code into individual software software except creation

[CIT383] Data and operations are combined as a single unit in Java with the help of \_\_\_\_\_  
class

[CIT383] When message passing abstraction hides underlying state changes, it is known as \_\_\_\_\_  
shared nothing

[CIT383] To access object variables and methods we use \_\_\_\_\_  
dot notation

[CIT383] In OOD, the technique of combining data and operation in a single unit is known as \_\_\_\_\_  
encapsulation

[CIT383] Hiding of internal state with all interaction performed through an object's method is \_\_\_\_\_  
data encapsulation

[CIT383] OOP is a programming paradigm that uses \_\_\_\_\_  
objects

[CIT383] In OOP, a class specifies the properties and \_\_\_\_\_ the objects can work with  
method
