

assumptions about influencing factors. This is called
abstraction

[CIT425] Linear programming model is an example of _____
All of the options

[CIT425] _____ that represents the relationship between the variables in the form of
formulas.
Analytic

[CIT425] Models that assume that the situation being represented will not change, at
least in its essential features, within the operational period, are called
Static

[CIT425] In a project management situation, the critical path method (CPM) uses a
_____ network model in which the durations of the activities are assumed to be known
for certain
deterministic

[CIT425] _____ is an imitation of the step-by-step process involved in the build-up
of system relationships.
Simulation

[CIT425] A Symbolic model is also known as a
Mathematical model

[CIT425] When changes in the independent or input variables of a relationship result in
constant proportional changes in the dependent, or output variables, it is termed
Linear

[CIT425] Which of the following is not true about Probabilistic model?
cannot predict the outcome within a certain stated or known degree of accuracy

[CIT425] The Program Evaluation and Review Technique (PERT) uses a model that
incorporates some _____ distribution of the durations.
probability
