

alcohols-mannitol and sorbitol

[CRP511] enzyme treatment result in _____protoplast, undigested tissues and cellular debris
Suspensio

[CRP511] techniques adopted in maintain protoplast population
all of the above

[CRP511] in enzyme treatment the PH of the solution is adjusted to somewhere between
4.7-6.0

[CRP511] depending on the species and culture condition, the protoplast may the potential to:
A and B

[CRP511] the protoplast experiment consist of stages including
all of the above

[CRP511] factors affecting yield viability of protoplast include
source of material

[CRP511] what is CPW
Cocking,Peberdy and white

[CRP511] _____ is a readily available source of genetically uniform cells
leaf tissue

[CRP511] applications of plant tissues culture include
to conserve rear and endengered plant species
