

expiration is called  
Residual volume

[NSC203] There are how many types of lung volume?  
4

[NSC203] What is normal respiratory rate?  
12-16 times/minutes

[NSC203] Which of these values represent the pressure of oxygenated blood leaving the alveolar capillaries  
100 mmHg

[NSC203] The plasma is a poor carrier of one of the following molecules in the blood?  
Oxygen

[NSC203] What is the volume value of functional residual capacity?  
2200ml

[NSC203] Complete the equation.  $Hb_4 + 4O_2 =$   
 $Hb_4O_8$

[NSC203] What is the partial pressure of blood containing oxygen in a normal body or in resting condition?  
100 mmHg

[NSC203] There are how many types of lung capacities?  
4

[NSC203] What is the value of the volume of air that can not be emptied from the lungs?  
1200ml
