

16 vibration/sec find maximum velocity and energy at mean position.  
802.8 cm/sec;  $1.6 \times 10^6$  erg.

[PHY203] The amplitude of a wave is doubled, with no other changes made to the wave. As a result of this doubling, which of the following statements is correct?  
The maximum transverse speed of an element of the medium changes.

[PHY203] Find the angular frequency  $\omega$  and speed  $v$  of a sinusoidal wave traveling in the positive  $x$  direction with an amplitude of 15.0 cm, a wavelength of 40.0 cm, and a frequency of 8.00 Hz, if the vertical displacement of the medium at  $t = 0$  and  $x = 0$  is 15.0 cm.  
50.3 rad/s; 320 cm/s

[PHY203] If the wavelength of a wave on a particular string is doubled, what happens to the wave speed  $v$  and the frequency  $f$ ?  
 $v$  is unchanged and  $f$  becomes one-half as great

[PHY203] Suppose you create a pulse by moving the free end of a taut string up and down once with your hand beginning at  $t = 0$ . The string is attached at its other end to a distant wall. The pulse reaches the wall at time  $t$ . Which of the following actions, taken by itself, decreases the time interval required for the pulse to reach the wall?  
Using a string of the same linear mass density but under increased tension

[PHY203] A sinusoidal wave traveling in the positive  $x$  direction has an amplitude of 15.0 cm, a wavelength of 40.0 cm, and a frequency of 8.00 Hz. The vertical displacement of the medium at  $t = 0$  and  $x = 0$  is also 15.0 cm. Find the angular wave number  $k$  and period  $T$  of the wave.  
0.157 rad/cm; 0.125 s

[PHY203] A taut string for which  $\mu = 5.00 \times 10^{-2}$  kg/m is under a tension of 80.0 N. How much power must be supplied to the string to generate sinusoidal waves at a frequency of 60.0 Hz and an amplitude of 6.00 cm?  
512 W

[PHY203] A block of mass  $m$  is first allowed to hang from a spring in static equilibrium. It stretches the spring a distance  $L$  beyond the spring's unstressed length. The block and spring are then set into oscillation. How will the period of this system compare with the period of a simple pendulum having a length  $L$  and a bob mass  $m$ ?  
Equal

[PHY203] A string is driven at a frequency of 5.00 Hz. The amplitude of the motion is 12.0 cm, and the wave speed is 20.0 m/s. Determine the angular frequency  $\omega$ , angular wave number  $k$  for this wave, and write an expression for the wave function.  
 $y = (0.120\text{m}) \sin (1.57x - 31.4t)$

[PHY203] A sinusoidal wave of frequency  $f$  is traveling along a stretched string. The string is brought to rest, and a second traveling wave of frequency  $2f$  is established on
