

Sublimation

[PHY455] A liquid-vapour mixture whose quality fraction is less than 100% is termed Wet mixture

[PHY455] Which of these gases absorbs energy and maintains the earth's temperature?
Carbon dioxide

[PHY455] What is the percentage composition of oxygen in exhaled air?
16 per cent

[PHY455] The fusion and vaporization temperatures of water at atmospheric pressure are
zero °C, 100°C

[PHY455] Quality fraction of the saturation region is defined as the fraction of mass present in the vapour phase

[PHY455] The sum of the quality fraction and the moisture fraction in a given saturation region is
1

[PHY455] The water vapour content in desert areas is
Low

[PHY455] As the temperature of air increases, there is a corresponding increase in the capacity of
water vapour

[PHY455] In the saturation regions,
temperature and pressure remain constant, but the specific volume changes significantly
