[PHY457] Which of the following forms part of the distinct components of planet Earth?
All of the options

[PHY457] At what height from the earth surface are geostationary satellites located?
36000 km

[PHY457] The solid component of the earth's system is called
the lithosphere.

[PHY457] Earth's atmospheric motions is dependent on
energy from the sun

[PHY457] The lithosphere is
the solid earth

[PHY457] The optimum working frequency for satellite systems lies between
2-12 GHz

[PHY457] The liquid water component of the earth system is
the hydrosphere

[PHY457] What factor is responsible for the orbiting of artificial satellites around the
earth?
Gravity

[PHY457] What is the function of a geostationary satellite orbiting around the earth?
International communication
