

Flower bud

[SED321] Cyclin is associated with _____
Cylosis

[SED321] Chromatids coiling in the mitotic division is _____
Plectonemic

[SED321] When there is an increase in the condensation of chromatin during the process of cell division, differentiation of euchromatin and heterochromatin

_____ decreases

[SED321] _____ is a form of cell division which results in the creation of gametes or sex cells
meiosis

[SED321] Chromatids coiling in the meiotic division is _____
Parasitic

[SED321] Synapsis is defined as the pairing of _____ chromosomes
Homologous

[SED321] The spindle apparatus is formed during the _____ phase of mitosis.
Metaphase

[SED321] The stage which serves as a connecting link between meiosis one and meiosis two
Interkineses

[SED321] The longest stage in the cell cycle is
interphase
