

Sexual isolation between two species can be _____.
Asymmetrical

Which of the following is not a type of variation?
RNA level

_____ had shaped the existing pattern of biodiversity. I speciation II Mutation III
Extinction
I and III

The following are related polymorphisms except _____.
Speciation

Recombination can occur:
Between genes

Who favoured the ideal that morphs become fixed in a population by means of weight
drift?
Dobzhansky

According to Wright the probability of a fixation of a beneficial Allele is _____
2s

Which of the following provide the solution to how variation is maintained in a population
with Mendelian inheritance?
Hardy-weinberg principles

Which of the following concepts does not trade equally well into ecological and
evolutionary theory?
Speciation

The followings are conditions for natural selection except:
Mutation
