

Chromatin

[BIO402] The experiments on double fertilization on sea urchin eggs in which the eggs were found to be fertilized by two spermatozoa were performed by Theodore Boveri

[BIO402] The mass of acromatic material which surrounds the chromonemata is called Matrix

[BIO402] A chromosome having two centromeres is known as Dicentric

[BIO402] A chromosome whose centromere is located at its end is known as Telecentric

[BIO402] The outer covering or sheath of a chromosome is known as Pellicle

[BIO402] The region where two sister chromatids appear to be joined during mitotic metaphase is known as Centromere

[BIO402] The two chromatids of chromosome separate from each other during Anaphase of mitosis and anaphase II of meiosis

[BIO402] A chromosome that have secondary constriction in addition to the primary constriction, is known as Satellite chromosomes

[BIO402] A nucleoprotein organized into repeating units called nucleosomes, is known as Eukaryotic chromatin
