

joining of chromosomes II Prevention of digestion of chromosomes III It is significant importance in genetic recombination
I and III

[BIO402] The chromatins that stain very darkily are called _____.
Hetrochromatin

[BIO402] The shortest chromosomes are less than _____.
1.0nm

[BIO402] The following terms can be used for qualitative description of chromosomes except _____.
Intermidiate

[BIO402] The longest chromosomes are longer than _____.
30nm

[BIO402] Nucleolar organizer chromosomes are otherwise known as _____.
Statellite

[BIO402] The concept wherby chromosomes or chromosomes regions are out of phase in respect to the coiling cycle and staining properties is refered to as _____.
Hetropyenosis

[BIO402] The largest chromosomes occur in _____.
Trillium species

[BIO402] Cytogenetics use ____ to demonstrate chromosomal characteristics.
1Karyotypes ii pedegrees iii idiograms
I and III

[BIO402] _____ chromatin is associated with intense genetic activity.
Euchromatin
