

males

[BIO403] Random change in allelic frequency due to chance is called genetic drift

[BIO403] Gene flow is associated with migration

[BIO403] Alleles within a population are potentially altered by mutation

[BIO403] Statistics analysis for testing Hardy-Weinberg equilibrium is chisquare

[BIO403] Mutation is the source of all new genetic variation

[BIO403] Sex-linked traits are controlled by X chromosomes

[BIO403] X-linked trait associated with blood disorder is haemophilia

[BIO403] The rate at which mutations arise is generally low

[BIO403] Most mutations are usually detrimental
