

Members of the family Paramyxoviridae comprise \_\_\_\_ subfamilies.

2

Members of the family \_\_\_\_ comprise the tick borne viruses.

Orthomyxoviridae

Members of the family Paramyxoviridae are sensitive to the following except \_\_\_\_.

ether

Virus can only be studied through the aid of an electron microscope that could magnify

up to

x 500,000

All these viruses are RNA viruses except ----

Adenoviridae

Which of the following families of virus is replicated from the integrated Provirus DNA

copy in infected cells?

Retroviridae

Which of the following factors is not a factor considered in the classification of viruses?

Natural methods of transmission

\_\_ were first isolated from human adenoid tissue.

Adenoviruses

The following are characteristics of Viruses except \_\_\_\_.

They are parasitic on their host

The term Herpesviridae means \_\_\_\_.

creeping
