

distillation

[CHM316] One of the best means of exchanging heat is steam

[CHM316]  $\hat{A}^{\hat{c}}$  is used to treat raw materials through physical steps to make them suitable for chemical reactions equipment

[CHM316] Chemical technology equipments are employed in the transformation of raw materials into product

[CHM316]  $\hat{A}^{\hat{c}}$  is a device used to facilitate the exchange of heat between two mixtures, from the hotter to the cooler one heat exchanger

[CHM316] Examples of heat exchangers include carburettor

[CHM316] A heat exchanger with a jacket around a pipe is tubular

[CHM316] A major disadvantage of recrystallization is time

[CHM316]  $\hat{A}^{\hat{c}}$  encompasses the scientific techniques used in the chemical industry chemical technology

[CHM316] In a  $\hat{A}^{\hat{c}}$  setup, the working fluid and the fluid in the pipe enter on the same side of the heat exchanger co-current
