

Termination of the process terminates _____
all threads within the process

Which of the following does not interrupt a running process ?
Scheduler process

The context of a process in the PCB of a process does not contain _____
context switch time

Which of the following need not necessarily be saved on a context switch between processes ?
Translation look-aside buffer

The primary distinction between the short term scheduler and the long term scheduler is _____
The frequency of their execution

In a multi-programming environment _____.
more than one process resides in the memory

Thread synchronization is required because _____.
all threads of a process share the same global variables

Which one of the following is not shared by threads?
program counter and stack

When the event for which a thread is blocked occurs, _____
thread remains blocked

The time required to create a new thread in an existing process is _____
less than the time required to create a new process
