

Hieroglyphics is derived from the Greek word hieroglyphica which means \_\_\_\_\_.  
sacred carvings

In the \_\_\_\_\_, the output is TRUE if exactly one of the inputs is TRUE, otherwise FALSE.  
XOR

\_\_\_\_\_ means replacing symbols or group of symbols by other symbols or groups of symbols.  
Substitution

A \_\_\_\_\_ is used to store any files downloaded from a corporate network over the SSL, VPN.  
sandbox

In the \_\_\_\_\_, the output is TRUE if either or both inputs are true, otherwise FALSE.  
OR

\_\_\_\_\_ is a stream cipher, based on iterating a set of coupled nonlinear function.  
Rabbit

In the \_\_\_\_\_ operation, the output is TRUE if all inputs are true, otherwise FALSE  
AND

The \_\_\_\_\_ is equal to the block size multiplied by the number of encryption rounds plus 1, which will provide  $Nr + 1$  different keys.  
Expanded key size

The purpose of \_\_\_\_\_ is to protect transmitted information from being read and understood by anyone except the intended recipient.  
cryptography

The process of taking the user key and expanding it into  $r_k$  bits for the Feistel rounds is called \_\_\_\_\_.
