

System

[DAM301] A(n) _____ cube is a data structure that allows fast analysis of data.
OLAP(Online Analytical Processing)

[DAM301] Data _____ facilitate the online analytical processing of multidimensional data.
cubes

[DAM301] _____ testing is done to ensure that the application developed works
from end-to-end perspective.

Integration

[DAM301] _____ provides two images of the same database and allows the two
databases to be synchronised simultaneously.

Mirroring

[DAM301] _____ testing is mostly a black-box.

System

[DAM301] _____ testing is the most critical because the actual users validate
your output datasets.

Acceptance

[DAM301] Operational Data Store (ODS) is an operational construct that has elements
of both _____ and a _____ system
data warehouse, transaction

[DAM301] Data _____ is based on the principle of populating the data warehouse
with quality data.

cleansing

[DAM301] _____ testing is necessary for a data warehouse to be scalable and
robust.
