

CHM202

=====

1. What is the second step in the sample treatment chart?

sampling

sample treatment

--->> sample preparation

aliquot

2. Test substance is called?

sample

composite

grab

--->> analyte

3. The test substance is also known as?

titrant

--->> titrand

reagent

titration

4. The method of sampling selection which aim at reducing the samples without creating a systematic bias is called?

--->> coning

pasting

chasen

pooled

5. Which of the following is not a chain of custody procedure?

sample seals

**Whatsapp: 08089722160 or click here for TMA assistance**

**Practice E-exams & Chat with course mates on [noungeeks.net](https://www.noungeeks.com)**

sample label

--->> sample time

6. Which of the following apparatus is used to measure titrand?

burette

--->> pipette

conical flask

test tube

7. The single samples collected at a specific spot at a site over a short period of time is called?

stratified

random samples

composite samples

--->> grab sample

8. The analytical technique that deals with reaction between measured volume of a reagent against the test substance in a stoichiometric manner is?

--->> volumetric analysis

gravimetric analysis

thermogravimetry

precipitation

9. Which of the following is not a major activities during the preparation of sample?

concentration

dissolution

mixing

--->> heating
