

1. Possession of kidneys among vertebrates is a strategy for \_\_\_\_\_. I. terrestrial adaptation II. osmoregulation III. water conservation.  
I and III
2. The following are extracellular fluids except \_\_\_\_\_.  
interstitial fluid
3. \_\_\_ is the first metabolic product of protein?  
ammomia
4. Which of the following is/are the excretory organs in crustaceans? I. green glands, II. coxal glands, III. antennal glands.  
II and III
5. Chromosomal changes that affects the whole set of chromosomes is referd to as \_\_\_\_\_.  
Aneuploidy
6. Marine teleost fishes excrete a large proportion of their nitrogen as \_\_\_\_\_.  
trimethylamine oxide
7. The process of urea synthesis occurs in the \_\_\_\_\_.  
liver cells
8. The follwing are functions of circulatory system except \_\_\_\_\_.  
unilateral distribution of heat in the kidney
9. Annelids exhibit \_\_\_ pattern of excretion?  
guanotelism
10. Osmosis involves the movement of water across a \_\_\_ membrane.  
selectively permeable
