

The amount of air in a soil sample is constant

[BIO320] Lack of soil water can lead to all but one of the following
More soluble nutrients becoming available to the microbes

[BIO320] Low pH lovers prefer one of these mediums
Acidic

[BIO320] One of these procedures is Cholodny modification of Rossi-Cholodny method
of soil microorganism extraction
Allowing the slide to stay in the soil for five days to three weeks

[BIO320] The culture of Saprolegniaceae will be favored by one of the following
materials
hemp seed

[BIO320] One of these is not a disadvantage of Rossi-Cholodny Slide
method of soil microbe isolation
Colonies arising are predominantly spores

[BIO320] Based on pH soil microorganism can be classified as all these except
Anerobics

[BIO320] One of these methods of soil microorganism isolation extracts active fungi
species rather than spores
perforated tube

[BIO320] Which of these materials can be used as a bait in the culture of phytophthora
cinnamoni
apple

[BIO320] All but one of these are functions of soil water
It discourages reproduction of microorganisms
