

Cinnabar is the ore of
Hg

The material mixed before ore is subjected for smelting in the extraction of iron are
Coke and limestone

An alloy which does not contain copper is
Magnalium

High purity copper metal is obtained by
Electrolytic reduction

Froth floatation process is used for the concentration of the ore of
Cu

In coordination chemistry, the donor atom of a ligand is
the atom in the ligand that shares an electron pair with the metal

The number of unidentate ligands in the complex ion is called
Coordination number

In the complex formation, the central metal atom / ion acts as
Lewis acid

Haematite ore is concentrated by
Gravity separation method

Which one of the following is not an ore of aluminium?
Epsomite
