

9/10

The microprocessor was invented in _____
1971

The task in which delay may be detrimental while performing can be perform using _____ microprocessor
Real Time Applications

The ALU five flip-flops are set or reset after an operation according to _____
conditions of the result in the accumulator and other
data

The salient features of 8085 microprocessor are the following except _____
It support not external interrupt request

Common microprocessor interface components includes the following except _____
Controller

microprocessors and microcontrollers comes in standard sizes of the following except _____
36 bits

which of the following operating system is capable of using a multi-core microprocessor
window 7

The following except _____ are the components of Components of 8085
Microprocessor
Registrar

The temporary store for the current instruction of a program can be called Instruction: (i)
Register (ii)Decoder
i and ii

which of the following is not among the components of 8085 Microprocessor
Address pointer
