

10.00/10.00.

The \_\_\_\_\_ works with the data structures to make sure it is harder to input irrelevant data into any of the databases in use on the system.

data query language

\_\_\_ is a distinguishable object that exists.

Entity

\_\_\_ enable DBMS to interact with the data without causing damage to the integrity of the data itself.

data structure

\_\_\_ facilitate the explicit specification of data constraints.

Object-Based Logical Models

\_\_\_ ensures the ability of the databases to communicate with the DBMS and thus operate on the system.

modeling language

A \_\_\_\_\_ is an association among several entities.

relationship

Object-based logical models describe data at the \_\_\_\_\_ and view levels

conceptual

\_\_\_ are computers that hold the actual databases

Database servers

The \_\_\_\_\_ model perceives the world a collection of basic objects and relationships among these objects.

entity-relationship

A Database Management System (DBMS) includes \_\_\_\_\_ main parts
