

1. In 1997, \_\_\_\_\_ is the AI system created by IBM, beat Gary Kasparov, the current world chess champion?  
Deep Blue (ANS)

2. In search problems, the states are represented as \_\_\_\_\_  
nodes (ANS)

3. The branch of technology that deals with the design, construction, operation, structural disposition, manufacture and application of robots is called \_\_\_\_\_  
Robotics (ANS)

4. The AI approach that aims to produce commercially viable "smart" systems such as, security system which recognises the faces of people who are permitted to enter a particular building is known as \_\_\_\_\_  
Applied AI (ANS)

5. Which of the following is an example of common-place task in a typical AI problem?  
\_\_\_\_\_ Object recognition (ANS)

6. An agent that acts in the best possible manner is referred to as \_\_\_\_\_  
rational agent (ANS)

7. ALVINN stands for \_\_\_\_\_  
Autonomous Land Vehicle in a Neural Network (ANS)

8. The term Artificial Intelligence was coined by McCarthy in the year \_\_\_\_\_  
1956 (ANS)

9. Facial recognition falls under what domain in Artificial Intelligence? \_\_\_\_\_  
Computer Vision (ANS)

10. The 1990's saw major advances in all areas of AI including the following except ,  
\_\_\_\_\_ Opportunistic Networks (ANS)
