potential of an, irrotational, ideal fluid with continuously distributed sources.
incompressible
[MTH382] The equation \(1-x^2\frac{d^2y}{dx^2}-2x\frac{dy}{dx}+n(n+1)y=0\) is called Legendary
lem:lem:lem:lem:lem:lem:lem:lem:lem:lem:
[MTH382] In the specialized equation $$\\Delta^2\theta^2\theta^2\theta^2\theta^2\theta^2\theta^2\theta^2\theta^2\theta^2\theta^2\theta^2\theta^2\theta^$
[MTH382] If \(R(c-a-b)>0\) and if \(c\) is neither zero nor a negative integer\(2F_1(a,b,c,1)=\frac{r(c)r(c-a-b)}{r(c-a)r(c-b)}\)
[MTH382] The equation $(x^2\frac{d^2y}{dx^2}+x\frac{dy}{dx}+(x^2-v^2)y=0)$ is called
Bessels equation of index \(v\)
[MTH382] A function \(f\) is said to be periodic with period \(T\) if the domain of \(f\) containswherever it contains x and y. \(x+T\)
[MTH382] Wave equation \(\Delta^2\theta=\frac{1}{c}\frac{\pi 2}\theta}{\partial t^2}\) arises in the study of propagation of waves with velocity $\tilde{A}^{\circ}\hat{A} \Box \hat{a} \in \tilde{A} \Box$, of the wave length. independent
[MTH382] The legend differential equation ofis given \((1-x^2)\frac{d^2y}{dx^2}-2x\frac{dy}{dx}+\frac{dy}{dx}+p(p+1)y=0\) order n
[MTH382] The equation of heat conduction \(\Delta^2\theta=\frac{1}{d^2}\frac{\cdot partial \theta}{\cdot partial t}\) is satisfied by the at a point of a homogeneous body and by the concentration of a diffused substance in the theory of diffusion with suitable presented constant \(\theta\).
