

The two types of endocytosis are

phagocytosis and pinocytosis

Carrier proteins are needed in

Facilitated diffusion

Major examples of fibrous proteins are

Collagen and Keratin

The structure of mitochondria include the following except

Outer membrane with lipid

The body maintains conditions within particular limits by

Negative feedback

The characteristics of monosaccharide include the following except

Glycosidic bond

Homeostatic mechanisms are maintained by

All organs

Dendrites of nerve fibers

transmits graded electrochemical impulses to the cell body

Oxytocin stimulates the uterus to contract is example of

Positive feedback

The functions of the cell membrane protein are the following except

None of the above
