

A typical example of a polyprotic acid is
 H_2SO_4

The following are examples of branched chain amino acids except
cysteine

What is the H^+ ion concentration of 0.001 M HCl?
0.001 mole

The transportation of lipids in the blood is carried out by
lipoproteins

When a little amount of H^+ ion is added to a buffer solution,
The equilibrium shift to the left

Which of the following is an example of essential amino acids
tryptophan

A typical example with an acid with many ionization points is
HCl

The buffer of the intracellular fluid is
phosphate buffer

The following are ketogenic amino acids except
Phenylalanine

The buffer of the extracellular fluid is
bicarbonate buffer
